# EMERGENCY DEPARTMENT INFORMATION SYSTEM

## Key takeaways

- Streamlines Emergency Department workflows
- Offers rapid access to timely, complete patient histories
- Enables faster action in time-critical situations
- Integrates seamlessly with the comprehensive Thrive EHR solution

In the Emergency Department (ED), speed and accuracy are everything. There is no time to waste trying to piece together patient histories or medication information from multiple information sources and interviews. From the nurses who perform triage to the physicians who make life-or-death care choices, everyone in the ED depends on timely, accurate and actionable information.

Thrive's Emergency Department Information System (EDIS) provides patient management optimized for the rural and community hospital setting.

Using Thrive's unique single patient record database, everything about an incoming patient — identifying information, past care interactions, lab results, medications — is available immediately, presented in the most useful way for the ED team. That's the kind of responsiveness, clarity and simplicity that saves lives.

## Enhancing situational awareness

The system's design helps physicians and nurses focus on the next critical task, while maintaining full awareness of, and control over, everything that's happening in the ED. Every patient movement and interaction is tracked and presented to caregivers through real-time, customizable color-coded displays. A patient's status is always available and displayed to family members in the waiting room. There is never any question of what's going on with a patient.

## Building accurate records for better outcomes

Thrive's EDIS is designed to capture information simply, rapidly and accurately. Documentation templates leverage patient data entered in the chart by other caregivers to efficiently build accurate and comprehensive notes. That leads to better care once the patient leaves the ED.

## Giving physicians and patients peace of mind

For physicians, knowing that they have complete, accurate and timely information instills confidence in their treatment decisions. And, with comprehensive historical records readily available, patients and family members can be spared the stress of having to recall detailed medical histories. That's a comfort level rarely found in the ED setting.

## Thrive EDIS offers ...

## ... so that you can

Timely patient records that span the continuum of care

Gain a thorough, contextual understanding of the patient

Seamless integration with the hospital's entire Thrive solution

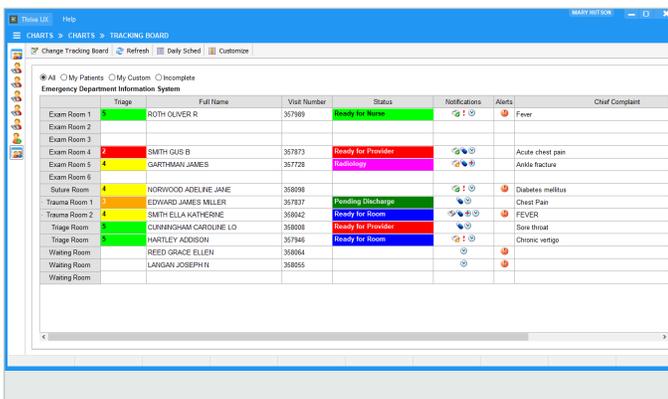

Have confidence all information is accurate and complete

Customizable workflows

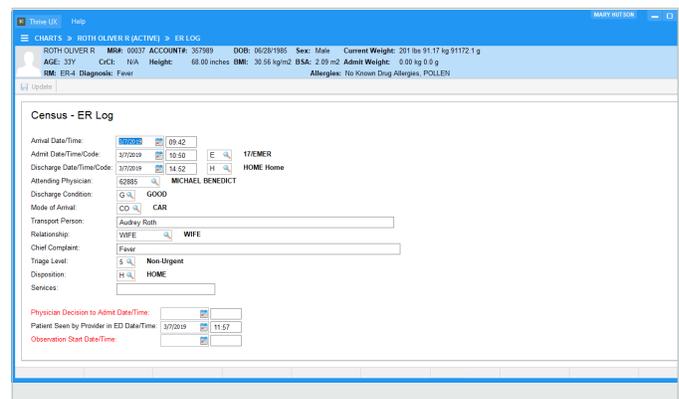

Tailor the ED flow to your own needs to speed care

At-a-glance patient status and order/result alerting

Maintain full awareness of events and prioritize actions
