- Procedures
- Weight Values
- Vital Signs
- Messaging
- Lab Results
- Documents

MyCareCorner can be downloaded in your app store. You can access your personal health record from hospitals, clinics and specialty care, now more conveniently than ever.

Benefits of MyCareCorner

Reduce Readmissions

The ability to track patient's metrics at home allows you to modify medications or treatment plans in between clinical touch points. Providers can step in before patients need acute and much more expensive care.

Deepen Relationships

With MyCareCorner, providers and patients can form a deeper relationship. They can securely message with any issues they have and are able to send information such as test results and records. MyCareCorner also give patients a way to easily make appointments and pay their bills.

Brand Loyalty

Patient satisfactions and keeping patients coming back for your services, is important for your organization's bottom line. Creating relationships with patients in your community and keeping them loyal to your institution will help increase your overall brand loyalty.

Improve Outcomes

Highly engaged patients have better outcomes. When a patient is well-informed and engaged in their health they adhere to their medical treatments, carry out more health-related behavior changes, leading to faster recovery and overall higher patient satisfaction.
